

## Web Accessibility Perspectives: Clear Layout and Design – Transcript

Narrator:

Web Accessibility Perspectives: Clear Layout and Design

Poor layout can be very frustrating.

And the same applies to the Web. Good design involves good layout and that means a better user experience.

This includes clear headings, navigation bars, and consistent styling.

Any web user will get frustrated with bad layout and design.

Complex layouts also make finding information difficult or impossible for people with visual disabilities.

And they are confusing for people with cognitive and learning disabilities who need clarity and consistency of the presentation.

Bad design also impacts anyone who isn't particularly confident around computers.

Web accessibility: Essential for some, useful for all.
